

## Smart RFID Kit

- Can work in new or existing storage spaces
- Real-time management capabilities
- Customized inventory management

### How:

The RFID kit is placed within the existing storage space, identifies the items in its proximity, and communicates the information to the software Platform cloud server. Detailed and sortable reports accessible from any web-enabled device itemize product, status (expired or about to expire), procedure, user, distributor, invoice, and more – giving materials management teams and others access to real-time information to adjust inventory levels and better manage costs.

### Where:

Potentially all cleanroom environments where efficient stock management is critical.

### Benefits:

- Fits any storage space
- Easy to install
- Does not require special infrastructure
- Connects to the cloud server
